How To Play

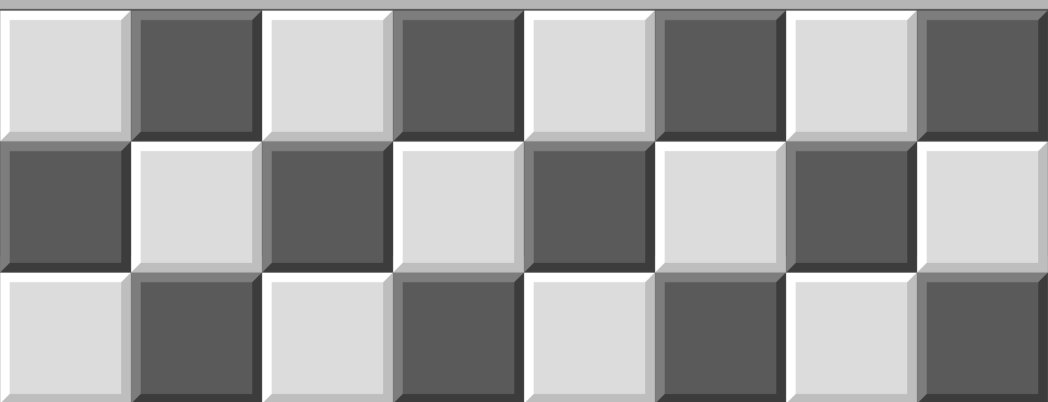

This will be a basic break down of how to play the combination of chess and minesweeper

Before we get into this, this guide will be under the assumption that you already know how to play both games, Minesweeper and Chess, on there own, all the same moves in chess are in this and all the number-to-mine patters from minesweeper are the same.

When you move a piece it will reveal what the tile is whether its blank, numbered, or a mine, if its the latter the pice will die and be taken out of the game. If its the first move of the game then it will always be numbered or blank just like how minesweeper starts.

All Chess pieces can be blown up by a mine, even the king, and Chess pieces can still capture each other.

The game ends just like how chess ends with one of the kings out of the game now whether is by capture or mine
